Annual awareness days help educate the general public and specific communities about HIV/AIDS. Since the virus affects people from all walks of life, the number of awareness days has increased over the years. Display this calendar to remind you of upcoming awareness days, and use the hashtags shown to promote them on social media. To find out more information about the various HIV/AIDS awareness days, visit poz.com/awareness-days.
There is no cure for HIV, but finding out how treatment helps make it possible to live a healthier life.

HIV ANSWERS, the HIV ANSWERS Logo, GILEAD, and the GILEAD Logo are trademarks of Gilead Sciences, Inc. All other marks are the property of their respective owners.

According to current research, starting and sticking to HIV treatment can lower the amount of virus in the body so much, it can’t be measured by a test. It’s called being undetectable. Starting HIV treatment as soon as possible can help stop the damage HIV causes to your body. Plus, doctors and scientists have found that it can help reduce the risk of some infections, certain cancers, and even AIDS.

TREATMENT HELPS PREVENT THE SPREAD OF HIV. Treatment helps make it possible to live a healthier life.

Here are two resources that can help.

Watch HIV: “Treat 2 Prevent”

HIV is still in the body, and being undetectable basically means there’s no HIV. But when you work together to get your viral load to zero, it helps stop the virus. When you start treatment, it helps make it possible to live a healthier life.

A HEALTHIER LIFE CAN START WITH HIV TREATMENT.

Stop THE VIRUS.

START HIV TREATMENT.
