A HEALTHIER LIFE CAN START WITH HIV TREATMENT.

It's important to start HIV treatment as soon as possible and stick with it. When you do, it helps stop the damage HIV causes. Plus, doctors and scientists have found that it can help reduce the risk of some infections, certain cancers, and even AIDS.

If you're living with HIV, a major goal is to get your viral load to undetectable. This means that there is so little virus in the blood that a test can't measure it. How can you get to and stay undetectable? By taking HIV treatment every day.

Current research shows that getting to and staying undetectable prevents the spread of HIV to others through sex.

TREATMENT HELPS PREVENT THE SPREAD OF HIV.
